ASHE RA WELLNESS JOURNAL

Web Application

Product Requirements Document

Version 1.0 · May 2026

Confidential — for internal / agent use only

Document Purpose

This PRD is a complete, self-contained specification for building the Ashe Ra Wellness Journal web application.

It covers product vision, brand guidelines, data architecture, feature specifications, API contracts,

animation system, and a phased implementation plan — everything a coding agent needs to ship the product.

Table of Contents

1 · Product Overview

1.1 Vision

Ashe Ra Wellness Journal is a full-stack web application that transforms a beautifully designed 571-page PDF wellness journal into a living, data-driven digital companion. Clients of the wellness coach receive the PDF for its tactile depth and monthly/weekly structure; the web app provides daily digital logging, streak accountability, and rich visual insights drawn from their own data — making the two formats a perfect pairing.

1.2 Problem Statement

PDF Limitations

- No accountability mechanism — clients forget to fill in
- No aggregation — patterns invisible across 480+ pages
- No coach visibility — progress stays private until a call
- Repetitive pages lead to drop-off after a few weeks

Web App Solutions

- Daily streaks + micro-animations drive return visits
- Auto-generated charts turn entries into insight
- Coach dashboard for aggregate client pattern review
- Structured form reduces friction vs blank PDF pages

1.3 Users

Primary: Wellness coach clients (women 25–55) who purchased the Ashe Ra PDF journal and want digital accountability.

Secondary: The wellness coach — reviewing aggregate trends, identifying at-risk clients, and celebrating milestones.

1.4 Success Metrics

- Day-7 retention ≥ 60% (clients return at least 4 of the first 7 days)
- Day-30 streak completion rate ≥ 40%
- Average session length ≥ 4 minutes (indicates genuine journaling, not surface taps)
- Coach NPS ≥ 50 within 60 days of launch
- Data completeness: ≥ 80% of logged entries have all 7 core sections filled

2 · Brand Guidelines

2.1 Aesthetic Direction

The Ashe Ra brand is warm, organic, and deeply feminine — like a handwritten letter tucked inside a pressed-flower journal. The digital product must preserve this intimacy. The UI should feel grown, not manufactured. Think Sunday morning light through linen curtains, herbal tea steam, the hush of a wellness retreat.

Keywords: Gentle · Intentional · Healing · Grounded · Warm · Alive

2.2 Colour System

Sage Primary	#7A9E7E	--color-sage	Primary CTA, headers, active states
Sage Dark	#4A7050	--color-sage-dark	Headings, nav text
Sage Light	#B5CEB8	--color-sage-light	Badges, tag backgrounds
Sage Pale	#DDE9DE	--color-sage-pale	Card backgrounds, input fills
Cream Warm White	#F5F0EA	--color-cream	Page background
Blush	#E8C4B8	--color-blush	Mood icons, accent cards
Gold	#C9A96E	--color-gold	Streak badge, milestone highlights
Lavender	#B8AED4	--color-lavender	Hormone & cycle section, sleep charts
Rose	#D4827A	--color-rose	Symptom alerts, stress indicators

2.3 Typography

Font Stack

Display / Headings: Playfair Display (Google Fonts) — serif, elegant, feminine
Body / UI: DM Sans (Google Fonts) — clean, approachable, highly legible
Accent / Italic: Playfair Display Italic — for affirmations, quotes, and section labels

> Scale (rem based, 1rem = 16px):
> xs: 0.75rem | sm: 0.875rem | base: 1rem | lg: 1.125rem | xl: 1.25rem
> 2xl: 1.5rem | 3xl: 1.875rem | 4xl: 2.25rem | display: 3rem+

2.4 Spacing & Border Radius

Grid: 8px base unit. Spacing tokens: 4, 8, 12, 16, 24, 32, 48, 64, 96px

Border radius: sm: 8px · md: 12px · lg: 20px · xl: 28px · pill: 9999px

Shadows: Use sage-tinted shadows exclusively. Never pure grey/black shadows.

shadow-sm: 0 2px 8px rgba(122,158,126,0.10)

shadow-md: 0 4px 20px rgba(122,158,126,0.15)

shadow-lg: 0 8px 40px rgba(122,158,126,0.20)

2.5 Tone of Voice

The UI copy should feel like a gentle wellness coach speaking directly to the client — never clinical, never demanding. Use second-person ('you'), present tense, and warm language. All empty states and prompts should be encouraging rather than guilt-inducing.

- "Haven't logged yet today — your body is waiting to be heard 🌿" — NOT "You have 0 entries today"
- "You showed up for yourself today ✨" — NOT "Entry saved successfully"
- "Rest is healing too — mark today with grace" — for missed day acknowledgement
- "Your healing journey, beautifully visualised" — NOT "User analytics dashboard"

3 · Technical Architecture

3.1 Stack Specification

Layer	Technology	Notes
Frontend Framework	Next.js 14 (App Router)	Server components + streaming
UI Component Library	Mantine v7	Theme provider wraps all Mantine components
Icons	Lucide React	Tree-shakeable, consistent stroke style
Animations	Framer Motion 11	Page transitions, micro-interactions, chart reveals
Data Visualisation	Recharts 2	Composable, SVG-based, accessible
Styling	CSS Modules + Mantine theme tokens	No Tailwind; Mantine theming is the source of truth
Language	TypeScript 5	Strict mode enabled; all props/DB types shared
Database	PostgreSQL (Supabase)	Auth, RLS, real-time subscriptions included
ORM	Prisma	Type-safe queries; schema-first development
Auth	Supabase Auth	Email magic link + optional Google SSO
State Management	Zustand + React Query	Global UI state (Zustand); server state (React Query)
Form Handling	React Hook Form + Zod	Validation schemas shared with API routes
Hosting	Vercel	Edge functions for API routes; ISR for static pages
File Storage	Supabase Storage	Future: coach document uploads
Email	Resend	Streak reminder emails, welcome flow

3.2 Folder Structure

Project Layout (Next.js App Router)

```
src/
  app/
    (auth)/          — login, register, magic-link pages (no nav)
    (app)/           — authenticated shell with sidebar
      dashboard/     — home + insights (page.tsx)
      journal/       — daily entry form (page.tsx)
      journal/[date]/— edit past entry (page.tsx)
      history/       — paginated entry list (page.tsx)
      monthly/       — monthly setup wizard (page.tsx)
      weekly/        — weekly review (page.tsx)
      onboarding/    — initial setup (goal, commitment letter)
      profile/       — account + notifications
    api/
      entries/       — CRUD for daily entries
      monthly/       — CRUD for monthly setups
      weekly/        — CRUD for weekly reviews
      insights/      — computed analytics endpoints
      users/         — profile updates
  components/
    ui/              — primitive components (Button, Chip, Slider, etc.)
    journal/         — journal-specific form blocks
    charts/          — Recharts wrappers
    layout/          — AppShell, Sidebar, Nav, Footer
    animations/      — Framer Motion reusable variants
  lib/
    db/              — Prisma client, query helpers
    hooks/           — useStreak, useEntries, useMood, etc.
    validations/     — Zod schemas (shared FE + BE)
    utils/           — date helpers, format helpers
  types/             — global TypeScript interfaces
  theme/             — Mantine theme configuration
```

4 · Database Schema

4.1 Prisma Schema

Core Models

```
model User {

```

5 · Animation System

All animations use Framer Motion 11. They are the primary driver of the "want to come back" feeling. Every animation must feel organic — like breathing, like water, like a gentle exhale. Never sudden, never mechanical.

5.1 Motion Principles

- Ease: Always use spring physics or gentle eases. Never linear. Default: spring { stiffness: 200, damping: 25 }
- Duration: Micro (100–200ms) for hover states; Normal (300–500ms) for reveals; Slow (600–900ms) for page transitions
- Direction: Entries drift in from below (y: 20 → 0). Exit upward (y: -10). Tab switches cross-fade.
- Stagger: List items reveal with 0.06s delay between each — creates a gentle cascade effect
- Respects prefers-reduced-motion: all animations wrapped in useReducedMotion(); static fallbacks provided

5.2 Component Animation Catalogue

Component	Animation	Framer Motion Config
Page Transition	Cross-fade + gentle y rise	initial:{opacity:0,y:16} animate:{opacity:1,y:0} transition:{duration:0.4,ease:"easeOut"}
Dashboard Card	Staggered float up on mount	variants: container (staggerChildren:0.07) + item (y:20→0)
Streak Number	CountUp animation on change	animate value from prev to new over 800ms with spring
Mood Emoji Selector	Bounce on select, scale ring pulse	whileTap:{scale:0.9} then scale:1.15 spring bounce
Chip / Tag	Scale 0.95 on press, green fill flood	layout animation + backgroundColor transition 200ms
Save Button	Gentle pulse glow on success	boxShadow keyframes: 0→24px sage glow→0 over 600ms
Confetti Burst	Particles drift from save button	30 elements: random dx, dy, rotation, fade out 1.2s
Progress Rings	Stroke draws from 0 on view	strokeDashoffset animated via useInView + 1s ease
Chart Lines	Draw on in from left	strokeDashoffset 0→length on mount, 600ms ease
Water Cups	Fill rises from bottom with ripple	scaleY 0→1 from bottom transform-origin, 300ms spring

Habit Grid	Cells pop in with stagger	scale 0→1 with 0.02s stagger per cell
Streak Badge (nav)	Flame flicker CSS animation	keyframes: slight scale + hue rotation loop
Section Scroll	Sections fade in on scroll	Intersection Observer + opacity/y transition
Affirmation Text	Gentle fade cross to new text	AnimatePresence with key change, opacity 0→1 400ms
Milestone Toast	Slides up from bottom, auto-dismiss	y:80→0 spring, then y:-80 exit after 3s

6 · Feature Specifications

6.1 Onboarding Flow

Triggered once after email verification. Full-screen multi-step wizard. Cannot be skipped. Sets the emotional context for the entire journey.

- Step 1 — Welcome: Animated logo reveal, brand affirmation, "Let's get to know you" CTA
- Step 2 — 11-Month Healing Intention: "If these next 11 months changed my life, it would be because…" + major health goal + how achieving it would feel
- Step 3 — Commitment Letter: Styled as the PDF's "Official Letter" page. "I am no longer the person who… I am becoming someone who…" Signature field (typed name, date auto-set)
- Step 4 — Nervous System Baseline: "How safe do I currently feel in my body?" — radio select from Not Safe / Sometimes / Mostly / Very Safe. Plus body relationship checkboxes.
- Step 5 — Month 1 Setup: Redirect into full Monthly Setup form for Month 1.

6.2 Dashboard / Home

Hero Section

- Personalised time-based greeting (Good morning/afternoon/evening, [name] 🌿)
- Today's date in long format (Tuesday, 6 May 2026)
- If not logged today: gentle CTA card with pulsing ring animation
- If logged today: completion summary (mood emoji, energy ring, water count)
- Daily affirmation — rotates daily, animated cross-fade, Playfair Display italic

Stats Bar

- Current streak (days) with animated flame — gold badge
- Total entries logged
- Entries this week / week goal (e.g. 4/7)
- Average mood this week (emoji + number)

Dashboard Cards Grid (responsive, 2–3 column)

- Check-in Heatmap: 30-day grid (inspired by GitHub contribution graph), sage = logged, pale = missed, gold outline = today
- Mood Sparkline: 7-day mood trend as a smooth area chart with Recharts
- Energy vs Stress: 7-day dual-line chart — diverging lines create immediate pattern recognition
- Sleep Quality: Mini bar chart — last 7 nights, coloured by quality (Deep=sage, Good=green, Fair=gold, Poor=rose)
- Hydration Ring: Single large ring showing today's water intake vs 2L goal
- Symptom Frequency: Small horizontal bar chart, top 3 symptoms this week

- Self-Care Activity Frequency: Mini donut chart — what self-care activities are showing up most
- Monthly Progress: Progress bar showing how many required sections (monthly, weekly, daily) have been filled this month
- Streak History Calendar: Full month mini-calendar with fill-in colour for each logged day
- Today's Body Check Rings: 4 animated SVG rings — Mood / Energy / Sleep / Water

6.3 Daily Journal Entry

The core product surface. Structured as a single long-scroll page with clearly delineated sections. Auto-saves to draft every 30 seconds. All sections optional except date.

Section 1 — Mood Check

5 emoji mood buttons (😞😔😐😊🌟) with animated scale on select. Mood label appears below with warm copy. Section auto-scrolls to next block on selection.

Section 2 — Body Check-In

- Multi-select chips: body feelings (Calm, Tired, Bloated, Light, Heavy, Anxious, Strong, Achy)
- Energy slider 1–5 with animated thumb and live label (e.g. "Medium energy ⚡")
- Stress slider 1–5 with colour-coded track (sage → gold → rose as stress increases)
- Pain/discomfort body map: checkboxes for None / Head / Stomach / Lower back / Pelvis / Joints / Other
- Skin condition: chip select (Clear / Dry / Oily / Acne / Breakout / Inflamed)
- Libido: chip select (Low / Normal / High) — subtle, unlabelled section title

Section 3 — Sleep

- Hours slept: large slider 0–12 with animated sleep moon icon that fills as hours increase
- Sleep quality chips: Poor / Fair / Good / Deep

Section 4 — Nutrition ("What I Ate")

- Four text areas: Breakfast / Lunch / Dinner / Snacks — minimal, no pressure
- Water intake: animated cup-tap UI (8 cups, 250ml each, fills with water animation)
- Calorie/protein intake: optional text field
- Herbal teas/supplements: chip multi-select (Herbal tea / Tincture / Capsules / Powder / Blends)
- Body response to food: textarea

Section 5 — Gut Health

- Bowel movement texture: chip select (Loose / Soft / Normal / Hard)
- Ease: chip select (Easy / Strained / Painful)
- After meals I noticed: multi-select chips (Bloating / Gas / Headache / Fatigue / Nausea / None)

Section 6 — Symptom Tracker

- Multi-select chips: Headache / Cramps / Dizziness / Brain Fog / Anxiety / Pain / Allergies / Fatigue + text input for "others"
- "What made it better?" textarea
- "What made it worse?" textarea

Section 7 — Hormone & Cycle Tracking (optional, dismissible)

- Gentle toggle to expand/collapse with "Optional but powerful 🌙" label
- Cycle phase: Period / Follicular / Ovulation / Luteal
- Cervical mucus: Dry / Sticky / Creamy / Egg-white
- Cycle mood: Stable / Sensitive / Irritable / Emotional / PMS or ovulation signs

Section 8 — Movement & Exercise

- Activity name (text input)
- Duration (number input, minutes)
- Intensity chips: Low / Moderate / High
- How body felt during: Good / Tired / Painful
- How body felt after: Energised / Neutral / Drained

Section 9 — Mind & Emotional Health

- Today I practiced: chips (Breathing / Stillness / Journaling / Prayer / Grounding)
- How my mind feels: Calm / Busy / Heavy / Clear
- "What stressed me" textarea
- "What supported me" textarea

Section 10 — Self-Care

Multi-select chip grid: Movement / Meditation / Journaling / Sunlight / Nature Walk / Stretching / Rest / Bath or Shower / Reading / Creative Time / Prayer / Other

Section 11 — Reflection

- "One thing I am grateful for today" — large textarea with gentle placeholder
- "One thing I am proud of today" — textarea
- "Any other notes / how my body responded" — free-form textarea

Save Button

Full-width sage gradient button. On success: confetti burst (petals, not squares — use flower emoji SVGs), toast slides up, user navigates to dashboard.

6.4 Weekly Review

Appears in the sidebar at the start of each week. Mirrors the PDF's sticky-note aesthetic with pastel card blocks.

- Week number + "What is my focus this week?" + "What are my non-negotiables?"
- Healing Cycle 1 (Mon–Wed) — same body check fields as daily but summarised
- Healing Cycle 2 (Thu–Sat) — repeat

- End-of-week review: How safe my nervous system felt (Unsafe/Neutral/Safe) + gratitude
- Weekly wins / challenges / food trigger discovered / energy-sleep pattern / what I learnt / where improvement needed
- Sticky-note card aesthetic: each block is a rounded card with a slight drop shadow and washi-tape-style top decoration (CSS pseudo-element)

6.5 Monthly Setup

Required at start of each month. Multi-step form. Data informs the month's dashboard personalisation and affirmation.

- Step 1 — Month Theme + Affirmation: Show the month's PDF theme (e.g. "Month 1: Returning to the Body"). User can adopt the affirmation or write their own.
- Step 2 — Health Snapshot: Current health symptoms frequency (checkbox grid), nervous system safety rating, body relationship (Loving/Conflicted/Frustrated/Disconnected/Hopeful/Exhausted), one limiting belief
- Step 3 — Stress & Nervous System Reality: 3 current stress levels (0–10 sliders), body stress reactions, biggest stress sources
- Step 4 — Monthly Food & Nervous System Support: Body needs more of (checkboxes), foods to reduce/stop (up to 5), foods to must-have (up to 5), nervous system supports (Deep breathing/Walking/Slow mornings etc.), herbal teas this month, one calming ritual
- Step 5 — Self-Care & Body Maintenance Checklist: 10-item checklist (Skin/Teeth/Hair/Muscles/Posture/Stress/Weight/Hormones/Recovery/Confidence), priority this month textarea
- Step 6 — Appointments & Treatments: Multi-select from PDF list (Massage/Physio/Dental/Braces/Micro-needling/Facials/Body scrub/Chiropractic/Hair & scalp/Laser/Gym assessment/Swimming/Acupuncture), self-care activity textbox
- Step 7 — Medical Snapshot: Lab results textarea, supplements/medications textarea, what changed checkboxes (Treatment/Medication/Supplements/Diet/Lifestyle), body response, next visit questions/focus

6.6 Insights & Analytics

The most powerful differentiator — turning raw entries into meaningful, visual wellness stories.

Summary Stats Row

- Current streak · Longest streak ever · Total entries · Average mood (all time) · Average sleep (all time) · Average daily water

Visualisation — Mood & Wellbeing

- Mood Journey Line Chart: Full date range, mood 1–5, smooth area chart with gradient fill (sage to white)
- Energy vs Stress Divergence Chart: Dual-axis, diverging colours — when energy goes up and stress goes down = good weeks highlighted with a sage band
- Mood by Day of Week: Horizontal bar chart — which days of the week the client tends to feel best (averages across all entries)

- Mood vs Sleep Correlation Scatter Plot: Each dot is an entry; x=sleep hours, y=mood; trendline drawn; insight text generated ("Your mood tends to be highest when you sleep 7–8h")

Visualisation — Sleep

- 14-Day Sleep Bar Chart: Hours per night, coloured by quality
- Sleep Quality Distribution: Doughnut chart (Poor/Fair/Good/Deep proportions)
- Sleep Trend Over Time: Rolling 7-day average smoothed line

Visualisation — Nutrition & Hydration

- Weekly Water Intake: Stacked bar or area chart, 8-cup goal line
- Herbal/Supplement Frequency: Horizontal bar chart
- Gut Health Pattern: Area chart of bowel ease scores over time

Visualisation — Symptoms & Body

- Symptom Heatmap: Month view — colour intensity by how many symptoms logged per day (dark rose = many, sage = few)
- Top Symptoms Horizontal Bar: All-time most reported symptoms, ranked
- Symptom Trend: Line chart for top 3 symptoms over last 30 days — are they improving?
- Pain Area Frequency: Body silhouette diagram (SVG) with colour-coded regions based on frequency

Visualisation — Movement

- Weekly Active Minutes Bar Chart
- Exercise Frequency Calendar (like habit heatmap but just for movement days)
- How body felt after exercise: Doughnut (Energised/Neutral/Drained)

Visualisation — Self-Care & Mindfulness

- Self-Care Activity Frequency: Donut chart — what's showing up most
- Practice Frequency: Breathing/Stillness/Journaling/Prayer/Grounding — radar chart
- Mind State Over Time: Stacked area (Calm/Busy/Heavy/Clear proportions per week)

AI-Generated Insight Callouts

Each section of the Insights page ends with a 1–2 sentence insight generated by calling the Anthropic API (claude-haiku-4-5-20251001 for cost efficiency) with the user's data summary. Examples:

- "Your best sleep weeks coincide with your lowest stress weeks — the connection is clear."
- "Bloating appears most on days you skipped herbal teas. Consider that connection this week."
- "You've moved your body 18 of the last 30 days — that's a streak to celebrate 🌿"

6.7 History / Journal Archive

- Paginated list (20 per page) of all entries, reverse chronological

- Each card: date, mood emoji, top 2–3 symptoms, self-care highlights, sleep/water badges, excerpt of gratitude/notes
- Filter bar: by month, mood range, symptom, date range
- Click to expand full entry in a modal or navigate to /journal/[date]
- Month separator headers with the month's theme shown (from MonthlySetup)

6.8 Streak & Gamification System

- Streak counter: consecutive days with at least one completed journal entry
- Milestone celebrations: 7 days (🌱 Seedling), 14 days (🌿 Growing), 21 days (🌸 Blooming), 30 days (🌟 Radiant), 60 days (💫 Luminous), 90 days (✨ Transformed)
- Each milestone triggers a full-screen moment: custom animation, encouraging message, and an optional share image (pre-styled)
- "Gentle return" message if streak breaks: "Rest is healing too. Welcome back, love 🌿" — restarts from 1 without shame
- Weekly completion badge: awarded if 5+ entries in a week
- Monthly completion badge: awarded if ≥ 20 entries in the month

7 · API Route Contracts

7.1 Daily Entries

POST /api/entries — Create or upsert entry for a date
Body: Partial<DailyEntry> (all fields optional except date)
Auth: Bearer token (Supabase JWT)
Returns: { entry: DailyEntry, isNew: boolean, streak: number }

GET /api/entries?from=YYYY-MM-DD&to=YYYY-MM-DD
Returns: { entries: DailyEntry[], total: number }

GET /api/entries/[date]
Returns: { entry: DailyEntry | null }

PATCH /api/entries/[date]
Body: Partial<DailyEntry>
Returns: { entry: DailyEntry }

7.2 Insights

GET /api/insights/streak — streak data
Returns: { current: number, longest: number, weeklyGoal: 5, thisWeek: number }

GET /api/insights/mood?period=7|14|30|90|all
Returns: { series: [{date,mood,energy,stress}], avgMood, avgEnergy, avgStress }

GET /api/insights/sleep?period=30
Returns: { series: [{date,hours,quality}], avgHours, qualityDistribution }

GET /api/insights/symptoms?period=30
Returns: { ranked: [{symptom, count, trend}], heatmap: [{date, count}] }

GET /api/insights/summary
Returns: { totalEntries, avgMood, avgSleep, avgWater, longestStreak, currentStreak, topSymptom, topSelfCare }

7.3 Monthly & Weekly

Monthly and Weekly endpoints

POST /api/monthly — create monthly setup
GET /api/monthly/[month] — get setup for month 1–11
PATCH /api/monthly/[month] — update

POST /api/weekly — create weekly review
GET /api/weekly/[week] — get by week number
PATCH /api/weekly/[week] — update

8 · Mantine Theme Configuration

theme/index.ts — complete Mantine theme object

```
import { createTheme, DEFAULT_THEME } from '@mantine/core';

export const theme = createTheme({
  fontFamily: 'DM Sans, sans-serif',
  fontFamilyMonospace: 'JetBrains Mono, monospace',
  headings: { fontFamily: 'Playfair Display, serif' },
  primaryColor: 'sage',
  defaultRadius: 'md',
  colors: {
    sage: ['#f0f7f1','#dde9de','#b5ceb8','#8db99f','#7a9e7e',
           '#5f8b66','#4a7050','#3a5a3f','#2a432e','#1a2c1d'],
    blush: ['#fdf0ec','#f5ddd5','#e8c4b8','#d9a898','#c98c7c',
            '#b97060','#a55450','#8a3d3a','#6e2929','#521616'],
    gold:  ['#fdf6e8','#f7e9c8','#efd4a0','#e6be78','#c9a96e',
            '#b0905a','#967748','#7a5c38','#5e4228','#422c18'],
    lavender:['#f4f2fa','#e5e1f5','#cac4e8','#ada4d8','#b8aed4',
              '#9a91c0','#7d74ab','#615895','#463e7a','#2c2560'],
  },
  components: {
    Button: { defaultProps: { radius: 'xl' } },
    Card:   { defaultProps: { radius: 'lg', shadow: 'sm' } },
    Badge:  { defaultProps: { radius: 'xl' } },
    TextInput:  { defaultProps: { radius: 'md' } },
    Textarea:   { defaultProps: { radius: 'md' } },
  },
  other: {
    shadowSage: '0 4px 20px rgba(122,158,126,0.15)',
    gradientHero: 'linear-gradient(160deg, #7a9e7e 0%, #4a7050 100%)',
  }
});
```

9 · Implementation Plan & Phases

Each phase is a shippable increment. Phases 1–3 constitute the MVP required for coach launch. Phases 4–5 are enhancement layers.

Phase 1 — Foundation (Estimated: 2 weeks)

Goal: Users can register, onboard, and submit a daily entry. Data persists.

P1.1 Project Setup
- Scaffold Next.js 14 with App Router, TypeScript strict, ESLint
- Install and configure: Mantine v7, Framer Motion, Recharts, Lucide React
- Configure Mantine theme (colors, fonts, radius, shadows) — brand guide §2
- Set up Supabase project: auth, database, storage buckets
- Configure Prisma with Supabase PostgreSQL connection string
- Run prisma db push with full schema (§4)
- Configure Vercel project, environment variables, auto-deploy from main branch
- Set up Resend for transactional email (magic link template)

P1.2 Auth & User Flow
- Supabase magic link email auth
- /login page with sage gradient hero, brand aesthetic
- Auth middleware protecting (app)/ routes
- User profile creation on first login (Prisma upsert)

P1.3 Onboarding Wizard
- Multi-step wizard (Steps 1–4 as specified in §6.1)
- AnimatePresence step transitions (slide from right)
- Saves to Onboarding table on completion
- Redirects to Month 1 setup on finish

P1.4 App Shell
- Mantine AppShell with collapsible sidebar
- Sidebar links: Dashboard, Journal, History, Monthly, Weekly, Profile
- Streak badge in top nav (reads from API)
- Mobile-responsive drawer nav

P1.5 Daily Journal Entry (MVP)
- All 11 sections from §6.3
- React Hook Form + Zod validation

- POST /api/entries on submit
- Auto-save draft to localStorage every 30s
- Success animation (confetti burst + toast)

P1.6 Basic API Routes
- POST/GET/PATCH /api/entries
- GET /api/entries/[date]
- GET /api/insights/streak

Phase 2 — Dashboard & Insights Core (Estimated: 2 weeks)

Goal: Dashboard is alive with data. Users can see their patterns.

P2.1 Dashboard Home Page
- Hero section (greeting, date, streak, affirmation)
- Stats bar (streak, total entries, this week)
- Today's status card — empty state CTA or completion rings
- 30-day check-in heatmap (SVG grid)

P2.2 Dashboard Charts
- Mood sparkline (7-day Recharts area)
- Energy vs Stress dual-line (7-day)
- Sleep bar chart (7-day)
- Hydration ring (SVG, today)
- All charts animate on mount (stroke draw)

P2.3 Insights Page — All Sections
- Summary stats row with CountUp animations
- Mood journey chart (full range)
- Sleep charts (bar, doughnut, trend)
- Symptom heatmap and ranking
- Self-care donut and radar
- Insights API routes §7.2

P2.4 History Page
- Entry list with pagination
- Filter bar (month, mood, date range)
- Entry cards with all metadata
- Click → /journal/[date] edit view

P2.5 Animation Pass
- Apply full animation catalogue from §5
- Test all animations with prefers-reduced-motion

Phase 3 — Monthly & Weekly + Gamification (Estimated: 1.5 weeks)

Goal: Full PDF feature parity. Streak system is live.

P3.1 Monthly Setup Form
- 7-step wizard (§6.5)
- POST/GET/PATCH /api/monthly
- Monthly affirmation displayed on dashboard for that month

P3.2 Weekly Review Form
- Full weekly review (§6.4)
- POST/GET/PATCH /api/weekly
- Prompt appears in sidebar at week start

P3.3 Streak Milestones
- Milestone detection on entry save
- Full-screen milestone celebration modal
- Milestone badges stored in User model (add milestones Json field)
- "Gentle return" message on streak break

P3.4 Email Reminders
- Daily reminder email (configurable time, opt-in)
- Weekly review prompt email (Monday morning)
- Milestone celebration email
- Resend email templates with brand styling

Phase 4 — AI Insights + Coach Dashboard (Estimated: 2 weeks)

Goal: Intelligent insight layer. Coach can view client data.

P4.1 AI-Generated Insights
- Anthropic API integration (claude-haiku-4-5-20251001)
- Insight generation endpoint: /api/insights/ai

- Context: last 30 days of summary data passed to model
- 3–5 insight callouts per Insights page section
- Cached per user per day (regenerate only when new entries exist)

P4.2 Coach Dashboard (Role: coach)
- Coach role in User model
- /coach route — protected, requires coachId
- Client list with streak badges and last-entry date
- Click client → see their full Insights page (read-only)
- Aggregate view: average mood/sleep across all clients this week
- Flag system: auto-flag clients with 0 entries in 7+ days

P4.3 Data Export
- /api/export?format=csv — exports all user entries as CSV
- PDF export of monthly summary (using puppeteer or react-pdf)

Phase 5 — Polish & Scale (Estimated: 1.5 weeks)

Goal: Production-hardened, delightful in every detail.

P5.1 Accessibility Audit
- WCAG 2.1 AA compliance
- Focus management in forms and modals
- Screen reader labels for all chart elements
- Keyboard navigation for chip selectors, sliders

P5.2 Performance
- Lighthouse score ≥ 90 on mobile
- Image optimisation (next/image for all assets)
- Dynamic imports for heavy chart components
- React Query caching strategy (5min stale time for insights)

P5.3 Progressive Web App
- Add PWA manifest, service worker (next-pwa)
- App installable on iOS and Android home screen
- Offline: cached entry form, syncs on reconnect

P5.4 Advanced Visualisations
- Correlation scatter plots (mood vs sleep, stress vs energy)

- Body silhouette SVG pain map
- Hormone cycle phase tracker (cyclical calendar)
- Monthly comparison: this month vs last month side-by-side

10 · Environment & Deployment

10.1 Environment Variables

Required .env.local variables

```
NEXT_PUBLIC_SUPABASE_URL=          # Supabase project URL
NEXT_PUBLIC_SUPABASE_ANON_KEY=     # Supabase anon key
SUPABASE_SERVICE_ROLE_KEY=         # Admin key (server-only)
DATABASE_URL=                      # Supabase PostgreSQL connection string
ANTHROPIC_API_KEY=                 # For AI insights (Phase 4)
RESEND_API_KEY=                    # For email reminders (Phase 3)
NEXT_PUBLIC_APP_URL=               # e.g. https://journal.ashera.com
NEXTAUTH_SECRET=                   # Random 32-char string
```

10.2 Getting Started (Agent Instructions)

1. Clone repository → npm install
2. Copy .env.example to .env.local and fill all variables
3. Run: npx prisma db push (creates all tables in Supabase)
4. Run: npm run dev — app available at localhost:3000
5. Run tests: npm run test (Jest + React Testing Library)
6. Deploy: push to main → Vercel auto-deploys

11 · Acceptance Criteria

Phase 1 Done When:

- User can register with email magic link, complete onboarding, and land on dashboard
- User can submit a daily entry with all 11 sections and see it persist in database
- Streak count increments correctly on consecutive daily entries
- App is mobile-responsive at 375px (iPhone SE) and 1440px (desktop)
- Auth middleware correctly redirects unauthenticated users to /login

Phase 2 Done When:

- Dashboard shows live data from user's entries (not static/mocked)
- All 4 dashboard charts render with correct data and animate on mount
- Insights page renders all 12 visualisation sections
- History page lists all entries with correct filter behaviour
- All animations from §5.2 are implemented and respect prefers-reduced-motion

Phase 3 Done When:

- Monthly setup wizard saves all 7 steps correctly to database
- Weekly review saves and month affirmation appears on dashboard
- Milestone toast appears at 7, 14, 21, 30, 60, 90-day streak milestones
- Streak-break returns the "gentle return" message on next login
- Reminder email is sent and uses brand-consistent HTML template
